## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-10 are rejected under 35 U.S.C. 102(e) as being anticipated by Vinding (USPN 7,104,491).
3. Vinding discloses a medical apparatus for adjusting the length of infusion tube, which comprises a housing with an axle/cylinder part arranged about a centre axis, said housing further comprising at least one turnable unit and a first axle, the centre axis of which coincides with the centre axis of the axle, and about which axle the turnable unit turns, characterized in that the turnable unit comprises a turnable first plate partition plate which is turnable about the first axle and a cylinder part turnable about the same axle; and in that, at its periphery, the partition plate comprises a circular plate return wheel around the periphery of which lengths of the tubing abut (see figure 6-10 and entire reference).
4. Claims 1-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Skowronski et al. (USPN 6,019,304).

5. Skowronski et al. discloses a medical apparatus for adjusting the length of infusion tube, which comprises a housing with an axle/cylinder part arranged about a centre axis, said housing further comprising at least one turnable unit and a first axle, the centre axis of which coincides with the centre axis of the axle, and about which axle the turnable unit turns, characterized in that the turnable unit comprises a turnable first plate partition plate which is turnable about the first axle and a cylinder part turnable about the same axle; and in that, at its periphery, the partition plate comprises a circular plate return wheel around the periphery of which lengths of the tubing abut (see figure 1-3 and entire reference).
